

C1 the copolyester polymer is prepared from at least one difunctional alcohol and at least one dicarboxylic acid; and

the low polarity telechelic oligomeric block segment is selected from the group of: saturated and unsaturated telechelic polyolefins, fluorine substituted telechelic oligomers and polymers, functionally terminated ABA block copolymers of polyalkyleneoxide (A) and alkyl and aromatic substituted polysiloxanes (B), and blends thereof.

Please enter new claims 64 through 66, as follows:

64. (new) The method of claim 1, wherein the substantial adhesion is aged adhesion to a high surface energy substrate.

C2 65. (new) The method of claim 64, wherein the high energy substrate comprises at least one material selected from untreated polyethyleneterephthalate, polyethylenenaphthalate, untreated oriented polypropylene, polyvinyl fluoride, nylon, polyimide, polycarbonate, polystyrene, polymethyl methacrylate, polyvinylidene fluoride, polyurethanes, and cellulose.

66. (new) The adhesive or coating of claim 50, wherein the composition has substantial retained adhesion to substrates comprising at least one material selected from untreated polyethyleneterephthalate, polyethylenenaphthalate, untreated oriented polypropylene, polyvinyl fluoride, nylon, polyimide, polycarbonate, polystyrene, polymethyl methacrylate, polyvinylidene fluoride, polyurethanes, and cellulose.

REMARKS

Claims 1-13, 17-23, 27-29, 34-47, 50-55, and 59-63 are pending in the subject application. Claim 37 has been amended and claims 43 and 44 have been cancelled. New claims 64 through 66 have been introduced. Applicants expressly reserve their right to pursue the subject matter of the cancelled claims in this or a co-pending application. Support for the amendment to claim 37 may be found in original claim 23 and throughout the specification. Support for the new claims 64-66 can be found throughout the specification. See, for example, page 7, penultimate line to page 8, line 8.
